REMARKS

After further evaluation, the Possible Special Weapons Storage Site at Oktyabrskoye Airfield reported in OAK 9013, Part 2, dated 19 December 1960 has been reclassified as a conventional weapons storage site.

It is felt that the site lacks too many features of known Type I or Type II sites to be classified in the airfield nuclear weapons storage category. Specifically, it lacks:

1. Site hardness - There is no evidence of the earth-revetted storage bunkers so characteristic of nuclear weapons storage areas.
2. Standardization - There is no resemblance to standard layout plan of Type I or Type II sites.
3. General appearance - This is more characteristic of conventional storage areas than of special weapons storage areas.
4. Support structures - It does not contain the elaborate support structures of Type I or Type II sites.

The site is located approximately 3 nautical miles south-southwest of the airfield.
